CHIROPRACTIC CENTER

# How do you know if you are truly healthy?

## did you know

How you feel is no indication of how healthy you are?

## did you know

Your body will break down muscle, bone and other body tissue in order to free up nutrients for more important bodily processes?

## did you know

You can have just 20% kidney or liver function left, yet show virtually no symptoms?

## did you know

Certain tests can identify environmental toxicities and their effect on your health?

## did you know

Using objective laboratory testing allows your provider to evaluate your unique results & identify emerging health problems, before it's too late?

## How is Carter Chiropractic Center different?

Starting with a consultation, your provider will determine what objective tests would be most beneficial in your case. Combining these results with other diagnostic tools, we are able to perform an in-depth analysis of your body. This analysis outlines any problem areas, minor & major conditions that if left untreated, may lead to serious illness, diseases and more.

Your detailed report will clearly explain specific dietary, lifestyle and nutrient recommendations based on your individual results. Just like a finger print, your blood chemistries and metabolism are unique. Our program is designed with that in mind.

For more information and to download our Nutritional Questionnaire, visit the New Patient section of our website.
